

How to Install Endpoint Security Client in EPS LAN

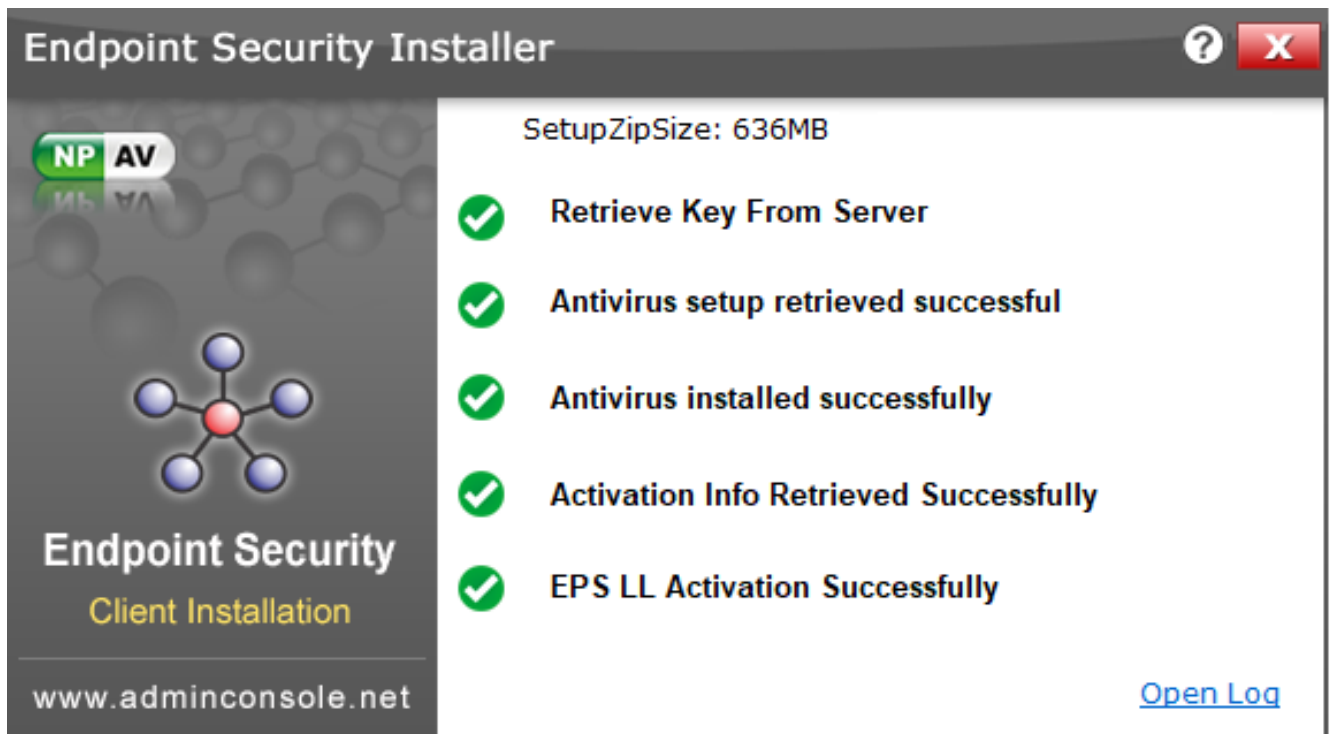

- Go to the EPS Console login page URL, for example:
localhost:7777 or ServerIP:7777
- Click on URL **DownloadCleintInstaller.exe**

- After the download is successful, extract the ZIP file containing DownloadClientInstaller.exe
- Run CIEPSLL_ServerIP.exe with administrator privileges
- **Confirm that the server IP is correct, and select a group from the “Select Group” dropdown if groups have been created on the console - (Optional)**
- Enter the friendly name you want to assign - (Optional)
- Click on Continue Button

- Wait for all installation steps to complete

The screenshot shows the 'Endpoint Security Installer' window. The title bar includes a help icon and a close button. The main content area displays a list of successful installation steps, each preceded by a green checkmark. The steps are: 'Retrieve Key From Server', 'Antivirus setup retrieved successful', 'Antivirus installed successfully', 'Activation Info Retrieved Successfully', and 'EPS LL Activation Successfully'. The window also shows the setup size as 636MB and includes a link to 'Open Log'.

Endpoint Security Installer [?] [X]

SetupZipSize: 636MB

- ✓ Retrieve Key From Server
- ✓ Antivirus setup retrieved successful
- ✓ Antivirus installed successfully
